## **REMOVAL OF SCRAP SHELF ON TOWN MBR UNITS**

Note: The cook top must be removed first, unless this is a new installation.

1. The shelf must be reinstalled with the scrap cups in the same position as shipped. It is suggested that numbers and/or arrows be placed around the Perimeter of the shelf and on the main body to ensure that the shelf is reinstalled in the proper position.
2. The shelf is held to the body by brackets that are screwed into the main body. Do not attempt to remove the brackets from the underside of the shelf- they are welded on.
3. Locate the brackets- the # of brackets will vary by the size of the unit. The brackets are attached to the body with stainless steel self-tapping screws. Before removing the screws brace the underside of the shelf so it does not drop onto the air mixers. Failure to brace the shelf may cause damage to the shelf, body and/ or the gas train components. Carefully remove the screws (a power screw gun is suggested). When all screws are removed you can lift the scrap ring off.
4. To reinstall the shelf, replace in proper position as noted. Brace as necessary. Do not over tighten the screws.

Please call the factory at 718-388-5650 if you have any questions.
